SUMMARY

Python backend developer who ships. I build production REST APIs with Django REST Framework, FastAPI, and PostgreSQL, and full-stack PWAs with React and LLM integration, all deployed and running in real use. Comfortable owning a feature end to end: schema design, auth, tests, and CI/CD.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, C++

Backend & API: Django, Django REST Framework, FastAPI, SQLAlchemy ORM, Alembic, Pydantic, JWT auth

Frontend: React, Vite, PWA (service workers, push notifications), HTML, CSS

Data & AI: Pandas, NumPy, ETL pipelines, LLM API integration (Claude, Gemini, OpenAI)

Databases: PostgreSQL, MySQL, MS SQL Server, SQLite

DevOps & Tools: Docker, Git, GitHub Actions CI/CD, pytest, Render, Vercel, Neon, Stripe

PROJECTS

Sleep Diary PWA | *DRF, React, Vite, PostgreSQL, SendGrid, GitHub Actions*

- Sleep clinicians track patient data on paper; I built a clinical PWA implementing the CSD-M instrument so a real sleep clinic could pilot digital tracking, cutting manual scoring.
- Wrote the math engine that computes derived sleep metrics (TST, TIB, sleep efficiency, WASO), plus email OTP signup, a trend dashboard, PDF report export with clinician delivery, and cron push reminders; shipped across 24 issues via CI/CD.

PCOS Tracker | *DRF, React, Vite, PostgreSQL, Claude API, Docker*

- PCOS management depends on daily lifestyle tracking most apps ignore; I built a full-stack health PWA that uses the Claude API to generate personalized meal and exercise plans from a user's logged data.
- Deployed live on Render/Vercel against managed PostgreSQL with DRF token auth, service worker, and offline support; delivered across 25 issues over 6 milestones.

CareTrack API | *FastAPI, SQLAlchemy 2.0, PostgreSQL, Alembic, JWT, Docker, pytest*

- A reference-quality healthcare backend to prove out production patterns: async SQLAlchemy 2.0, Pydantic v2, and JWT role-based access over a relational schema (User, Patient, Provider, Care Plan, Appointment) with Alembic migrations.
- Full CRUD with a 26-test pytest suite running in CI and Docker deployment on Render.

Urban Spark | *Django, PostgreSQL, Stripe, pytest, GitHub Actions*

- Restaurant booking breaks on double-bookings and clunky payments; co-built (team of 3) a reservation/management system with 6 roles, conflict detection, loyalty points, and Stripe, backed by a 370+ test suite with CI/CD.

EXPERIENCE

Senior Project Coordinator - Bayshore Healthcare, Toronto *Nov 2023 – Present*

- Built a Power Automate workflow that detects version changes on a shared Excel schedule, converts UTC to Eastern, and routes conditional approvals/notifications, removing a recurring manual check.
- Translated business requirements into technical specs for backend systems as the primary liaison between engineering, finance, and operations.
- Reviewed workflow designs with backend engineers and validated data flows against compliance requirements during post-deployment testing of the MBC and OBA apps.

eClinical Implementation Specialist - Axiom Real-Time Metrics, Toronto *May 2022 – Nov 2023*

- Configured clinical study workflows, forms, and validation logic on internal eClinical platforms across staging, QA, and production.
- Ran system and user acceptance testing, documented defects with reproduction steps, and drove resolution with development teams.

Software Developer & Project Lead - Humber College, Toronto *May 2020 – Aug 2020*

- Designed and built the backend for a project-management simulation tool with randomization algorithms for scenario testing, driven by JSON config files; led a team of 8 to remote delivery.

Software Developer (C++, Python) - Early Career, India *2017 – 2019*

- Developed and optimized C++ and Python systems for telecom infrastructure and industrial relay/control, including embedded sensor monitoring and data-processing tooling.

EDUCATION & CERTIFICATIONS

Certificate, Python Backend Web Development - University of Alberta (Sep 2025 – Jun 2026)

B.Tech, Instrumentation & Control Engineering - Bharati Vidyapeeth's College of Engineering (2015 – 2019; WES: Canadian 4-yr Bachelor's equivalent)

Project Management - Humber (2020) · Oracle Java Core · Udemy Python & C++ Bootcamps · LinkedIn Learning: Agile Foundations
