

ASHRAY SIKKA

Toronto, ON, Canada | (647) 836-0764 | ashray15.sikka@gmail.com | [linkedin.com/in/ashraysikka](https://www.linkedin.com/in/ashraysikka) | github.com/AshraySikka | ashraysikka.com

SUMMARY

Python backend developer focused on production REST APIs with Django REST Framework, SQLAlchemy, and PostgreSQL. Recent work includes full-stack PWAs with React and LLM integration, deployed and running in real use. Comfortable owning a feature end to end, from schema design to CI/CD.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, C++

Backend & API: Django, Django REST Framework, FastAPI, REST API, SQLAlchemy ORM, Alembic, Pydantic, JWT authentication

Frontend: React, Vite, PWA (service workers, push notifications), HTML, CSS

Databases: PostgreSQL, MySQL, MS SQL Server, SQLite

Data & AI: Pandas, NumPy, ETL pipelines, LLM API integration (Claude, Gemini, OpenAI)

DevOps & Tools: Docker, Git, GitHub Actions CI/CD, pytest, Render, Vercel, Neon, Stripe

PROJECTS

PCOS Tracker | *Django REST Framework, React, Vite, PostgreSQL, Claude API, Docker*

- Built a full-stack health-tracking PWA (DRF + React/Vite), deployed live on Render/Vercel against managed PostgreSQL; integrated the Claude API for personalized meal/exercise plans.
- Shipped an installable PWA with DRF token auth, service worker, and offline support across 25 GitHub issues over 6 milestones.

Sleep Diary PWA | *Django REST Framework, React, Vite, PostgreSQL, SendGrid*

- Built a clinical sleep-diary PWA implementing the CSD-M instrument with a math engine computing derived sleep metrics (TST, TIB, sleep efficiency, WASO); piloted by a real sleep clinic.
- Developed email OTP signup, trend dashboard, PDF report export with clinician delivery, and cron-based push reminders; deployed via GitHub Actions CI/CD across 24 issues.

CareTrack API | *FastAPI, SQLAlchemy 2.0, PostgreSQL, Alembic, JWT, Docker, pytest*

- Built a production-style healthcare REST API with async SQLAlchemy 2.0, Pydantic v2, and JWT auth; designed a relational schema (User, Patient, Provider, Care Plan, Appointment) with Alembic migrations.
- Implemented full CRUD with role-based access, a 26-test pytest suite in CI, and Docker deployment on Render.

MedScan AI | *Django, Claude Vision API, Pillow*

- Built an AI radiology platform where clinicians upload scans and receive structured diagnostic reports (impression, per-finding severity, confidence, recommendation) via the Claude Vision API.

Urban Spark | *Django, PostgreSQL, Stripe, pytest, GitHub Actions*

- Co-built a restaurant reservation/management system (team of 3) with 6 roles, conflict detection, loyalty points, and Stripe payments; 370+ test pytest suite with CI/CD.

EXPERIENCE

Senior Project Coordinator - Bayshore Healthcare, Toronto *Nov 2023 - Present*

- Translated business requirements into technical specifications for backend systems, serving as the primary liaison between engineering, finance, and operations.
- Built a Power Automate workflow detecting version changes on a shared Excel schedule, with UTC-to-Eastern timezone conversion and conditional approval/notification routing.
- Reviewed system workflow designs with backend engineers and validated data flows against compliance requirements during post-deployment testing of the MBC and OBA apps.

eClinical Implementation Specialist - Axiom Real-Time Metrics, Toronto *May 2022 - Nov 2023*

- Configured clinical study workflows, forms, and validation logic on internal eClinical platforms (eBuilder) across staging, QA, and production.
- Executed system and user acceptance testing, documented defects with reproduction steps, and coordinated resolution with development teams.

Software Developer & Project Lead - Humber College, Toronto *May 2020 - Aug 2020*

- Designed and implemented backend logic for a project management simulation tool with randomization algorithms for scenario testing; used JSON config files to drive app behavior.
- Led a team of 8 to deliver the project in a remote academic setting.

Early Career, Software Development (C++, Python) - India *2017 - 2019*

- Developed and optimized C++ and Python systems for telecom infrastructure and industrial relay/control applications, including embedded sensor monitoring and data-processing tooling.

EDUCATION & CERTIFICATIONS

Certificate, Python Backend Web Development - University of Alberta *(Sep 2025 - Expected Jun 2026)*

B.Tech, Instrumentation & Control Engineering - Bharati Vidyapeeth's College of Engineering *(2015 - 2019; WES-evaluated: Canadian 4-yr Bachelor's equivalent)*

Project Management - Humber Institute of Technology and Advanced Learning *(2020)*
