Ashray Sikka

Software Engineer | Python, Django, FastAPI, React

Toronto, ON | (647) 836-0764 | ashray15.sikka@gmail.com
ashraysikka.com | linkedin.com/in/ashraysikka | github.com/AshraySikka

Python backend developer who ships. I build production REST APIs with Django REST Framework, FastAPI and PostgreSQL, and full-stack apps with React and LLM integration, all deployed and running in real use. I own features end to end, from schema to CI/CD. I started as a C++ and Python developer, moved into healthcare implementation and coordination, and I am returning to hands-on engineering on purpose.

TECHNICAL SKILLS

Languages	Python, SQL, JavaScript, C++
Backend	Django, Django REST Framework, FastAPI, SQLAlchemy, Alembic, Pydantic, JWT auth, RBAC, REST API design
Frontend	React, Vite, PWAs (service workers, push notifications, offline support), HTML, CSS
AI and LLM	Claude API, Gemini API, Claude Vision API, RAG, role-scoped AI search, prompt design
Data	PostgreSQL, MySQL, MS SQL Server, SQLite, Pandas, ETL pipelines
DevOps	Docker, GitHub Actions CI/CD, Git, pytest, Render, Vercel, Neon

PROJECTS

Sleep Diary PWA
ashraysikka.com/projects/sleep-diary

DRF, React, Vite, PostgreSQL, SendGrid, GitHub Actions

- Sleep clinics track patient data on paper, so I built a clinical PWA on the CSD-M instrument. A real sleep clinic piloted it.
- Wrote the math engine for derived sleep metrics (TST, TIB, sleep efficiency, WASO), plus OTP signup, a trend dashboard, clinician PDF export and push reminders, shipped across 24 issues via CI/CD.

CareLink | healthcare coordination platform
ashraysikka.com/projects/carelink

Django, DRF, React, PostgreSQL (Neon), Gemini API, RAG

- Rebuilt a seven-role coordination platform as a Django and React app I own end to end, with invite-only JWT auth, shift change approvals, geofenced clock-in and realtime messaging.
- Built a Gemini-powered assistant with RAG and role-scoped search, so each user type only retrieves data they are allowed to see.

SafeBelly Winner, Cursor Toronto Hackathon, Jul 2026
ashraysikka.com/projects/safebelly

DRF, React, Claude API, Gemini API

- Built a pregnancy product safety scanner: scan a barcode, photograph a label or paste ingredients and get a trimester-aware verdict with the reasoning. Unknown ingredients return unknown instead of a guess.
- Cleaned noisy bilingual label text in Python, queried three public product databases and ran ingredient checks in parallel.

Pulse | alarm triage for care teams
ashraysikka.com/projects/pulse

DRF, React, PostgreSQL (Neon), Claude API

- Groups care team alerts into incidents and ranks them by urgency with the score breakdown shown for each; the demo turns 151 alerts into 41 incidents.

CareTrack API
ashraysikka.com/projects/caretrack-api

FastAPI, SQLAlchemy 2.0, PostgreSQL, Alembic, JWT, Docker, pytest

- Healthcare backend with async SQLAlchemy 2.0, Pydantic v2 and JWT role-based access over a relational schema (User, Patient, Provider, Care Plan, Appointment), a 26-test pytest suite in CI and Docker deployment on Render.

Also built: Urban Spark (team of 3; Django, Stripe, 370+ tests with GitHub Actions CI/CD), PCOS Tracker (DRF, React, Claude API meal and exercise plans), MedScan AI (Django, Claude Vision API reports).

EXPERIENCE

Senior Project Coordinator | Bayshore Healthcare, Toronto
Nov 2023 to Present

- Built a Power Automate workflow that detects version changes on a shared Excel schedule, converts UTC to Eastern and routes conditional approvals and notifications, removing a recurring manual check.
- Translated business requirements into technical specs for backend systems as the primary liaison between engineering, finance and operations.
- Reviewed workflow designs with backend engineers and validated data flows against compliance requirements during post-deployment testing of the MBC and OBA apps.

eClinical Implementation Specialist | Axiom Real-Time Metrics, Toronto
May 2022 to Nov 2023

- Configured clinical study workflows, forms and validation logic across staging, QA and production; ran system and user acceptance testing and drove defect fixes with development teams.

Software Developer and Project Lead | Humber College, Toronto
May 2020 to Aug 2020

- Built the backend for a project-management simulation tool with randomization algorithms, driven by JSON config files; led a team of 8 to remote delivery.

Software Developer (C++, Python) | Early career, India
2017 to 2019

- Developed and optimized C++ and Python systems for telecom infrastructure and industrial relay and control, including embedded sensor monitoring and data-processing tooling.

EDUCATION

Python Back End Web Development Certificate | University of Alberta — 2025 to 2026

B.Tech, Instrumentation and Control Engineering | Bharati Vidyapeeth's College of Engineering (WES: Canadian equivalent) — 2015 to 2019
